

INSTRUCTIONS FOR GROWING YOUR CHIA PET®

1. Fully submerge Chia Pet® in water and soak for half an hour.
2. Mix 2 teaspoons of chia seeds with 2 tablespoons (1/8 cup) of water in a separate container. Wait 5 minutes then stir the seed mixture until you get a jam-like consistency.
3. Remove and empty water out of the Chia Pet®. Let it sit for 2-3 minutes, then apply a thin, even layer of seeds to the outside of the clay.

TIP: If seeds appear too dry and hard to spread, stir in a little more water. If the seeds are too runny, stir in a small amount of seeds.

4. Let seeds dry and do not water for 2 days.
5. After 2 days, fill the Chia Pet® with water using the hole at the top of the planter and place in drip tray.

TIP: To help seeds sprout, place a plastic bag loosely over your Chia Pet® at night to create a greenhouse effect, taking it off in the morning. The bag should not be sealed and should be big enough that it does not touch the seeds on the Chia Pet®.

6. Top the Chia Pet® off with fresh water and empty the drip tray every day. Seeds should sprout in 3-4 days.

TIP: Chia Pet® planters do best in a spot where it will receive plenty of fresh air and sunlight.

7. When growth appears leggy or overgrown, it is time to remove the old growth, wash the Chia Pet®, and replant. Seed packet contains enough seeds for 3 plantings. Chia Pet® planters can be washed and reused indefinitely.
